DRAFT MINUTES

Town of Tyringham

Planning Board Meeting

7:00 PM November 18th

Virtual Meeting hosted via Zoom, Tyringham, MA 01264

In Attendance: Ellen Slater Gonnello, Peter Salinetti, Carol Hardy-Fanta

Public in attendance: none

ANRs, Courtesy Notices, Mail: none

New Business:

Carol noted that the town website does not define the difference between the Zoning Board & the Planning Board.

Old Business:

Floodplain Bylaw

- Amanda emailed explaining she reached out to BRPC with our question about the Floodplain Admin. They agreed that it would likely be the Building Inspector, Larry Gould. They suggested she double check with the state though. Amanda emailed the contacts with MA state & has not heard back yet.
- Carol shared information she found "Town of Tyringham Natural Hazard Risk Assessment"
 (attached) which shows we should have maps from studies done in the 1970s and in 2005. This
 also included helpful information such as 717 acres of 100-year floodplain within the town which
 amounts to 5.9% of the total town. There are 22 residential buildings within the floodplain which
 is 7.8% of the residential buildings.
- The board will ask Molly where the floodplain study maps are stored, specifically the FIS. The
 map name and numbers will need to be referenced. Carol noted these maps are not on the town
 website.
- The board will ask Larry about the Admin role and for guidance on where in our bylaw this should be placed. The main question is will this replace our section 6.8 entirely or will we need to just rework & add to the existing floodplain bylaw section 6.8.

Carol asked about the Town Plan that has been discussed by the board in the past and suggested we discuss it again. Pete & Ellen agreed with Carol on this and stated its importance. The board thinks it best to revisit this after the several draft bylaws are complete. These need to be done before the town meeting in May.

Subject: Flood Map info for Wednesday meeting
To: E Gonnello <e gslater@gmail.com>

Here are some documents I found useful. First is the 3 pages from the BPRC Mitigation plan describing the Natural hazard risks in Tyringham. Following that are the 7 panels (which make up the FIRM—Flood Insurance Maps.) I'm still trying to track down the FIS (Flood Insurance Study, which is the report that goes along with them.)

Town of Tyringham Natural Hazard Risk Assessment

Community Profile

The Town of Tyringham is located in south central Berkshire County. It is bordered by Becket and Otis on the east; Monterey on the south; Great Barrington on the west and Lee on the north. It is a rural, residential community with steep, forested hillsides rising up from Tyringham Valley through which Hop Brook, the town's main stream, flows. The valley with its pastureland and historic farmhouses is as picturesque as any in New England.

The Town of Tyringham covers an area of 18.85 square miles. The town's population is 327, giving a density of 17 people/square mile. The town has experienced a steady population of around 340 since 1980, yet lower than its historic high of 821 in 1850 (US Census Bureau).

There are 138 occupied housing units, resulting in a household size of 2:4 people per household. Tyringham has 131 seasonal housing units, or 46.8% of its total housing units (US Census Bureau). The predominant land uses in town are forests (82.9%), agriculture (7.5%) and residential (2.0%) (MassGIS, 2010).

Critical Facilities

A list of the critical facilities within the community is shown in table 83. This data was taken from the communities CEMP and reviewed for accuracy by the town. These facilities were digitized into GIS and used for determining vulnerability to the various hazards.

Table 83. Critical Facilities - Tyringham

| ALC: | Name | Address |
|------------------------------------|-----------------------|---------------|
| Fire | Fire Station | 100 Main Road |
| Police | Police Department | 116 Main Road |
| Health Services | Fire Station | 100 Main Road |
| Town Offices | Town Hall | 116 Main Road |
| All All | Town Offices | 2 Church Road |
| Emergency Operations Center | Town Hall | 116 Main Road |
| Alternate Operations Center | Fire Station | 100 Main Road |
| Public Works | Town Garage | |
| Shelters | Fire Station | 100 Main Road |
| | Town Hail | 116 Main Road |
| Special Needs | Sisters of Visitation | Beach Road |

Flood Prone Areas

Tyringham has fewer streams and water bodies then most Berkshire communities, but they are still Impacted by them. The streams include Hop Brook, Merry Brook, Crystal Brook, Camp Brook Cooper Brook and Higley Brook. The water bodies include part of Goose Pond, Shaker Pond, South House Pond, Sodom Pond, and a number of approximately 1 acre plus beaver ponds...

The town has several floodprone areas.

Goose Pond Road, which is partially a dirt road, has beaver problems at the Copper Brook culvert. The plugging of the culvert by the beavers has caused the road to flood.

Beavers around Beach Road have caused the water to approach the bridge. There is concern of damage to the bridge and flooding due to the beavers.

There is a beaver dam in a wetland north of Main Road. If that dam breeches, land all the way down to Main Road will be flooded.

There are beaver dams throughout the floodplain of Hop Brook, causing high water in some locations and low water flows in other locations.

There are a number of other beaver ponds throughout the surrounding hillsides that when breached cause flash flooding conditions through the center of town.

The state recently replaced a bridge on Breakneck Road. This new bridge is too low and often floods.

Flooding Vulnerability Assessment

An analysis of the FIRM flood hazard area maps indicates that there is a total of 717.0 acres of 100-year floodplain within the town. This amounts to 5.9% of the total town. Based on additional analysis, 19.3 acres (2.7%) of the floodplain are developed. This leaves 697.7 acres that are potentially developable under current zoning (Berkshire Regional Planning Commission, 2010). The town does currently have a floodplain bylaw, protecting Zone A's as shown on the FIRM. Currently there are no commercial or industrial buildings in town, but 22 residential buildings (7.8%) within the floodplain (Table 84) (Berkshire Regional Planning Commission, 2010). The percentage of buildings is then multiplied by the total property value, as determined from the Department of Revenue, to come up with a potential loss. In addition to this, an additional percentage of the value was added to represent the contents of the properties. This can'be found in Table 85.

Table 84. Number of Buildings in Floodplain - Tyringham

| Buildings in Floodplain | | | | | | | |
|-------------------------|------|------------------------|------|---|------|----------------------|------|
| The second second | | Commercial No. Percent | | | | Total No. Percent | |
| 22 | 7.8% | 0 | 0.0% | 0 | 0.0% | 22 | 7.8% |

Source: (Berkshire Regional Planning Commission, 2010)

Table 85. Loss Estimate for Properties within the 100-year Floodplain (\$000) - Tyringham

| | Residential Property | Residential Contents (50% Property Value) | Commercial Property | Commercial Contents (100% Property Value) | Industrial Property | Industrial Contents (125% Property Value) | Total Loss Estimate |
|---|-------------------------|---|------------------------|---|------------------------|---|------------------------|
| 1 | \$13,787 | \$6,893 | \$0 | \$0 | \$0 | \$0 | \$20,680 |

Source: (Berkshire Regional Planning Commission, 2010)

According to data provided to BRPC from MEMA, there have been no flood insurance claims in Tyringham since 1978 (MEMA, 2010). The town is very concerned that a number of their critical facilities are within the Hop Brook floodplain. This includes the fire station, maintenance yard and town offices, which includes the police station.

Structurally Deficient Bridges over Waterways

Tyringham has no bridges over water that are classified by MassDOT as "structurally deficient" (MassDOT, 2010).

Hazard Potential of Dams

The DCR Office of Dam Safety lists three (3) dams in the Town of Tyringham as shown in Table 86. One of these dams is of significant hazard, Goose Pond Dam, but is in good condition (Office of Dam Safety, 2004). Given these dams, the town considers itself to be of low risk for dam failure.

Table 86. Dams - Tyringham

| Name | Hazard Code | Size Class | Inspection Condition | Other | Location |
|------------------|-------------|--------------|-------------------------|------------------------|---|
| Goose Pond Dam | High | Large | Good | | Goose Pond off of Lakeside Drive |
| Schell Dam | Low | Unknown | Unknown | Non- jurisdictional | Hop Brook off of Sodem Road |
| Shaker Pond Dam | Significant | Intermediate | Good | | Shaker Pond off of Jerusalem Road |
| South House Pond | Unknown | Unknown | Unknown | | Off of Brace |
| Dam | | The same | D. | | Road |

Source: (Office of Dam Safety, 2004)

Winter Storms

The entire town considers itself to be at risk for winter storms, however the area around Goose Pond, and the hills above 1500' around Monterey and Otis tend to be more susceptible for winter storms.

Other Natural Hazards

Other than flooding and winter storms, the Town of Tyringham does not have any locations in town that are more susceptible to natural hazard events. High winds, wildfire and other natural hazards can all occur at any location in town.

Natural Hazard Risk Assessment

Based on the hazards identified in this plan and the assessment of the risks of the Town of Tyringham, the town considers itself to be at a **high risk** for flooding, winter storms (blizzards / snow / ice storms) and severe storms (thunderstorm, wind, hail, lightning); **moderate risk** from dam failure, tornados, hurricane and tropical storms, extreme temperatures and wildfires; and **low risk** for drought, landslide, earthquakes and ice jams.

These maps may not include all Special Flood Hazard Areas in the community. After a more detailed study, the Special Flood Hazard Areas shown on these maps may be modified, and other areas added. Consult NFIA Servicing Company or local insurance agant or bester to determine if preparties in this community are eligible for flood insurance.

Here is also a brief description of how to read/use the maps— which I should point out are supposedly in the hands of a town's planning board. Do you think you should ask Molly or someone else if there are real (large scale) copies at town hall? These are all from 2005 or earlier (1970st)

Flood Bylaws-Flood Maps

The Flood Map provides information that allows you

- To identify Special Flood Hazard Areas. (SFHA)
- To identify the location of a specific property in relation to the Special Flood Hazard Areas. To identify the base (100-year) flood elevation at a specific site.

 To identify the magnitude of flood hazard in a specific area.

- To locate regulatory floodways,

 To identify undeveloped coastal barriers, where flood insurance in not available.

Useful information/Tutorials: https://www.fema.gov/flood-maps/tutorials#other

What Are Flood Maps?

To prepare the Flood Maps that illustrate the extent of flood hazard in a flood prone community. FEMA generally conducts engineering studies referred to as Flood Insurance Studies (FISs). Using the information gathered in these studies, FEMA engineers and certographers delineate Special Flood Hazard Areas (SFHAS) on Flood Maps. Special Flood Hazard Areas are subject to inundation by a flood that has a 1-percent or greater chance of being equaled or exceeded during any given year. This type of flood commonly is referred to as the 100-year flood or base flood.

A 100-year flood is not a flood that occurs every 100 years!

In fact, the 100-year flood has a 26 percent chance of occurring during a 30-year period, the length of many mortgages, The 100-year flood is a regulatory standard used by Federal agencies and most states, to administer floodplain management programs, The 100-year flood is used by the National Flood Insurance Program (NFIP) as the basis for insurance requirements nationwide.

Documents Related to Flood Maps are Available

The results of the Flood Insurance Study are also available in a technical document that provides information used for floodplain management. This is known as the Flood Insurance Study Report (FIS).

Regulatory floodways and other floodplain management information may be shown on a separate Flood Map. This is known as a Flood Boundary and Floodway Map (FBFM). It is typically distributed with the Flood Insurance Study report, but is not distributed as a part of a standard map request. On many newer Flood Insurance Studies. floodways are included on the FIRM so FBFMs are not included. The Flood Insurance Study report and maps can be reviewed at the community office for floodplain management activities in your community.

Copies of the report and Flood Maps may also be obtained from FEMA's Map Service Center.

http://www.msc.fema.gov/

The Flood Maps for your community should be available for review at your local Community Map Repository site. Typically, this is your local planning, zoning, or engineering office.

If you would like copies of Flood Maps, they may be obtained from FEMA's Map Service Center (http://www.msc.fema.gov/). Because the Map Service Center maintains thousands of Flood Maps, you will need to provide specific information about the map(s) you want to order, such as the name of the community and the county it lies in, or the six-digit community number,

Glossary Terms

1-percent annual chance floodplain

This is the boundary of the flood that has a 1-percent chance of being equaled or exceeded in any given year. Also known as the 100-year floodplain.

TMI? True, But it's what I found so far. CarolHardy-Fanta.com
